

Simulations

By: Joe Mattivi

What is simulations?

You try to replicate the real environment as much as possible.

What do students learn?

The students will learn-

- how the job or task is done in the real world
- Learn early experience on something they might use in the future
- Problem solving skills

Why is it good to use in education?

- It's really good for hands-on learners
- It helps motivate students
- It's generally fun for the students
- It's inspirational
- Know how to solve situations

Where it is used

It's generally used in vocational courses and social sciences

Examples

- Money management
- Historical events
- How to run a community
